SUMMARY

Frontend Developer building data-heavy ERP/CRM interfaces in Angular 21 + TypeScript (RxJS, Signals, Akita) with focus on predictable state management and UI performance. Comfortable owning features end-to-end from Figma to production; backend (Go, C++) and design background give me full product understanding.

SKILLS

Stack	JavaScript (TypeScript), HTML5, CSS3 (SCSS), RxJS, C++, Go
Framework	Angular (Signals, Akita, NG-ZORRO), React
Tools	WebStorm, VS Code, Figma, Git / GitHub / GitLab
Natural Languages	Belarusian (native), Russian (native), English (B2), Chinese (HSK4)

WORK EXPERIENCE

Frontend Developer (Angular) Aug 2025 – present

Sugarant — ERP/CRM/MCA platform for deals, payments and customer data. Stack: **Angular 21**, **TypeScript**, **RxJS**, **Signals**, **NG-ZORRO**, **Akita**; REST APIs, **2-week Scrum**, GitHub workflow. Owning frontend delivery across multiple product areas.

- **End-to-end feature delivery** — designed and shipped a side-panel calendar from scratch (Day/Week/Month/Expanded views, all-day events, invitation handling), backed by a dedicated Akita store for events, invitations and busy dates.
- **Module redesign & business logic** — redesigned the Participants and Syndicators modules end-to-end — list views, detail panels, their payments and the underlying payment logic and deal relationships — from Figma spec to production.
- **Complex data tables** — built a cross-column filtering system (global filter button synced two-way with per-column filters, persisted across sessions) and per-user column-visibility preferences across 10+ list views.
- **Access control & integrations** — implemented role-based UI access across forms, actions and toolbars; maintained existing Twilio dialer/SMS flows with async, error and edge-case handling.
- **Framework migration** — led Angular 21 adoption across owned modules during the team-wide v17 to v21 upgrade, migrating to Signals, OnPush change detection, standalone APIs and the new `@if/@for` control flow.

PROJECTS

AgroTech	Decision support system for fertilizer prediction; implemented React frontend, integrated with Django REST API and ML models (XGBoost, Optuna).
Movie Search	React + Vite SPA with debounced live search and public API integration.

EDUCATION

Sep 2023 – Jun 2027	Applied Computer Science at Belarusian State University (GPA: 8.0/10.0)
Nov 2024 – Aug 2025	Courses “Frontend/JavaScript”, “React” at RS School
2023	Yandex Lyceum (Go), Yandex Academy (C++ intro)

Last updated: June 23, 2026
